

Tips for Studying Mathematics

- 1. Go to class: When you are absent, make up your work immediately.
- 2. Ask questions and listen when others ask questions. This is very important.
- 3. Review regularly. 10-20 minutes a day of review beats 3 hours of cramming. Trust me!
- 4. Review your notes before beginning your homework.
- 5. Show all of your work and check your work. Developing good habits during practice will help you during tests and quizzes.
- 6. Practice, Practice, Practice. This is the most important part. Rework homework problems and rework problems from your notes.
- 7. Make a list of important concepts and formulas. Explain the concepts in your own words, and review the list so that you can memorize what's really important.
